

REMARKS

In the Office Action mailed September 27, 2005, the Examiner noted that claims 1-6 were pending, and rejected all claims. Claims 1, 2 and 4 have been amended, claim 6 has been canceled, and, thus, in view of the forgoing claims 1-5 remain pending for reconsideration which is requested. No new matter has been added. The Examiner's rejections and objections are traversed below.

In the Action the Examiner objected to claims 1 and 3, and claim 1 and 2 have been amended in consideration of the Examiner's comments. Withdrawal of the objection is requested.

In the Action the Examiner rejected the claims variously as anticipated by Higashi, Zhou or Gonzales.

Claim 1 now calls for "the solder bumps being area-arranged on a surface of the electronic part". The prior art does not teach such within a method as is claimed. Withdrawal of the rejections is requested.

It is submitted that the present claimed invention patentably distinguishes over the prior art and withdrawal of the rejection is requested.

The dependent claims depend from the above-discussed independent claims and are patentable over the prior art for the reasons discussed above. The dependent claims also recite additional features not taught or suggested by the prior art. For example, claim 2 calls for ultrasonic vibrating the area arranged bumps to connect them. The prior art does not teach or suggest such. It is submitted that the dependent claims are independently patentable over the prior art.

It is submitted that the claims are not taught, disclosed or suggested by the prior art. The claims are therefore in a condition suitable for allowance. An early Notice of Allowance is requested.

If any further fees, other than and except for the issue fee, are necessary with respect to this paper, the U.S.P.T.O. is requested to obtain the same from deposit account number 19-3935.

Respectfully submitted,

STAAS & HALSEY LLP
